GROW BAGLEY COTTON — MAKE GREATER PROFITS

4 Great STRAINS

Texas-bred to suit your land

TYPICAL PYRAMIDAL STALK OF BAGLEY COTTON. Plants like this will make more dollars for you on your own farm

64 MASTER STRAIN

Neuest **Regular Bagley Type**

This newest of the Bagley Master Strain Cottons was developed from a cross of our 793 Master Strain and some other very prolific strains which gives added vigor for greater yields. Bagley 64 Master Cotton has been isolated, tested, compared and re-tested for many years in the Bagley Genetic Gardens and increase progeny plots. It has passed these rigid tests with exceptional success. Suited to any and all cotton growing soils, Bagley 64 Master grows off fast, fruits quickly, and has pyramidal type strong, sturdy stalk with lengthy, short-jointed fruiting branches, and light foliage. It has a majority of 5-lock drooping bolls that are easily picked, and a deep penetrating root system that makes it a real drought resister. With 50 to 60 bolls per pound seed cotton, IT IS STORM RESISTANT AND HIGH IN VARIETAL PURITY. Bagley 64 Master Cotton is a heavy producer, gives a gin turnout of 38% to 40%, and has an excellent quality staple of 31/32-inch to 1 1/32-inch, according to soil and season. You'll enjoy growing this new, different, better cotton! Only a limited quantity of this seed is available this season because of the limited foundation seed stock, so it is advisable to send in your order early.

793 MASTER STRAIN

Regular Bagley Strain

Our 793 Master Strain is a well-balanced, high yielding cotton that gives excellent performances in the field, at the gin and on the market. Backed by more than 30 years of good, sound breeding work, it is very prolific, fast fruiting and often produces from 10% to 25% more than ordinary cotton. The upright, strong, sturdy stalks produce a strong, hard, uniform 15/16-inch to 1 full inch staple and a gin lint turnout of 39% to 41%, dependent on soil and season. Lengthy, short-jointed fruiting branches bear a majority of big, round, uniform five-lock bolls with a slight point. Well-shaped bur makes it easy to pick. 50 to 60 bolls make a pound of seed cotton. 793 grows fast, fruits excessively and matures early. The medium foliage is adequate for proper boll protection during ordinary dry, hot summers. Its deep, penetrating tap roots and fine lateral rooting system often insure crops in dry seasons when ordinary cottons fail. Has medium-size, uniform, high-quality seed that gives good germination. This cotton is highly STORM RESISTANT. DROUGHT RESISTANT and has a HIGH VARIETAL PURITY.

B-17 ROYAL ROWDEN

Neuest **and best yielding Rowden type**

B-17 Royal Rowden is new and different. It is fast becoming known as the cotton that is adaptable to most soils and climates suited to cotton growing. It is very prolific and fast fruiting, often making from 15% to 25% more per acre than ordinary cotton. B-17 has an upright pyramidal stalk with well-spaced, short-jointed fruiting branches that produce big, fluffy bolls which open nicely and are picked easily. 50 to 60 bolls make a pound of seed cotton. This cotton grows off extra fast, sets fruit rapidly, and opens early. The foliage is reduced to a minimum, affording less harborage for insects and allowing crop to mature quicker. The good tap and lateral rooting system increases yield ability. The lint turnout runs from 37% to 40%, dependent on land and season. A hard, strong, uniform staple 31/32-inch to 1 1/16-inch results, according to soil and season. Bagley B-17 Royal Rowden has uniform, medium to large size seed with well-filled, healthy kernels, that give good germination. DROUGHT RESISTANT—STORM RESISTANT—WILT RESISTANT.

SELECT DELTAPINE

Heavy Producing Deltapine

Our Bagley Select Deltapine Cotton is an exceptionally heavy yielder being very well suited to bottom land or rich, flat, level land but it also gives good results on upland and is adapted to almost any kind of cotton growing soil. It grows rapidly, sets fruit quickly, matures and opens early. Foliage is very light, making it more insect resistant. It has an upright, sturdy stalk with well-spaced, lengthy, short-jointed fruiting branches which produce medium bolls that open well and pick clean. About 70 to 80 bolls make a pound of seed cotton. It is a heavy fruiter and under favorable conditions increased production of 10% to 25% is often obtained. Average lint turnout ordinarily runs from 39% to 41% dependent on soil and season and has a good uniform staple of 1 inch to 1 1/16 inch according to soil and season. It has a fine rooting system. Seed are small to medium with well-filled kernels. Supply of this seed is very limited, so order early!

PLANT BAGLEY HYBRIDS — GET BIGGER YIELDS

No. 30

This is the Newest Double-cross Yellow Hybrid giving an excellent performance in the field. It has a grand pedigree of four great inbred strains—173D x 203 by 325 x 303. Widely adapted to all types of corn growing soils and gives increased yields ranging up to 35% and often more over ordinary corns. Has nice, large ears with deep golden grain. This corn has good root system, stout stalk that stands up well, and is highly resistant to root lodging. Matures very early. Be sure to plant some of this number the coming season.

No. 28

Another new Double-cross Yellow Hybrid. A really fine corn. Contains Yellow Surcropper inbreds making it similar to Texas No. 8. Has wide range of adaptability and will give heavy yields in all corn-growing areas of the state. Produce large ears and large grain of good yellow color. Matures early. Has fine shuck protection and is therefore more resistant to earworms and weevils. Drought resistant heavy stalk and fine root system. Increases yields 20% to 35% over ordinary corns. Get some of this good new Hybrid!

No. 26

New Double-cross Yellow Hybrid. An outstanding corn. All four inbred strains developed from native Texas varieties. A very good yielder—makes 20% to 35% more—matures very early, being one of the earliest of the Texas Hybrids. Nice size ears with yellow dent type large grains of yellow color. Similar to No. 18. Good shuck cover—more insect resistant. Strong sturdy stalk and excellent root system. Drought resistant. Adapted to all corn-growing regions of the state. Try this number—you'll like it!

No. 24

A Double-cross Yellow Hybrid. Nice ears with good shuck protection making it insect resistant. Makes 20% to 35% more than ordinary corns. Good size grains that are medium hard and of good color. Stout, vigorous stalk with strong root system—resistant to lodging—matures early. Well adapted to southern corn-growing areas. High yielding—DROUGHT RESISTANT. An excellent corn that gives good results on all types of corn-growing soils. Growers like it—plant some.

No. 15-W

The Newest Double-cross Texas White Hybrid—combination of four outstanding inbreds. It is more resistant to root lodging and has less stalk breakage. Makes heavy yields (up to 35% more) with large percent of 2 ears per stalk. Matures very early. Medium ear with medium soft grain. Widely adapted. Drought resistant. Try this brand new white—it's a good corn!

No. 11-W

A fine Double-cross White Hybrid, giving excellent results. Makes 20% to 35% more than ordinary varieties. Heavy producer—early maturing. Medium ear with fine shuck cover—insect resistant. Soft, white grains well set on cob. Grows fast—good root system and sturdy vigorous stalk. Widely adapted to all corn-growing soils. Drought resistant. If you plant white corn you will be pleased with this number.
